Online Patient Transfer System

Introduction:

Nowadays several life aspects aim to use technology to facilitate work, speed it up, and as an attempt to cope with this trend in the medical sector, there were some computerized system which assist medical work by using Information and Communication Technology (ICT) which organize the medical sectors significantly.

The existing system achieve several function as financial reports, patient visiting reports. This project is to develop a new system that helps to make the patient transferring between hospitals easier by having standard form all hospitals in West Bank area. This technology helps to eliminate the conflicts of information needed between hospitals by having the standard form for all hospitals online.
