

List of figures

Figure 2.1: the value and direction of shunt blood flow rate.....	12
Figure 2.2: simplified schematic of the circulatory system.....	14
Figure 3.1: Flow access using saline dilution method.....	18
Figure3.2: The location of temperature sensors.....	20
Figure3.3: flow access monitoring by using extracorporeal temperature gradients.....	21
Figure3.4: hematocrit measurement by blood sample.....	23
Figure 3.5: Automated analyzer.....	23
Figure 3.6: Doppler method.....	24
Figure 3.7: LED method.....	28
Figure4.1: HD Flow Diagram.....	30
Figure4.2: Project Block Diagram.....	32
Figure4.3: NTC Temperature Sensor.....	33
Figure4.4: Linearization of a Thermistor.....	34
Figure4.5: sensor measurement circuit.....	35
Figure4.6: buffer circuit.....	36
Figure4.7: Non-Inverting amplifier circuit.....	37
Figure4.8: (a)generalLED(b)LTL-10254WLED.(c) TSHA550LED.....	38
Figure4.9: Timing Signal for Two LED.....	39

Figure 4.10: Constant Current Source.....	39
Figure4.11 : (a) general phototransistor (b) SE-08 phototransistor. (c) General Photodiode(d) SD-21AF photodiode	41
Figure 4.12: Phototransistor Receiver.....	41
Figure4.13: High Pass Filter.....	42
Figure 4.14: Low Pass Filter.....	44
Figure 4.15: Access Blood Flow Circuit.....	46
Figure4.16: HematocriteCircuit by using IR LED.....	47
Figure4.17: Hematocrite Circuit by using yellow LED.....	48
Figure5.1: Mega Arduino	50
Figure 5.2: flowchart for access blood flow and recirculation ratio measurement.....	53
Figure5.3: flow chart for HCT and Plasma volume measurement.....	55
Figure 6.1: temperature sensors position.....	59
Figure 6.2: blood flow rate.....	60
Figure 6.3: Patient screen.....	60
Figure 6.4: Voltmeters readings before reversing.....	61
Figure 6.5: Voltmeter readings after reversing.....	62
Figure 6.6: UFR rate.....	63
Figure 6.7: hematocrit percentage and plasma volume.....	63

Figure 6.8: patient weight.....	64
Figure 6.9: Patient gender.....	64
Figure 6.10: Low Pass Filter curve.....	67
Figure 6.11: High Pass Filter curve.....	68
